Public Notice

Launch of the Patent Online Filing System

The Institute is pleased to announce a significant milestone in our commitment to enhancing service delivery and embracing digital transformation. This is in line with the Government's digitalization of public services aimed at improving efficiency, accessibility and inclusivity as spelt out under the Bottom-Up Economic Transformation Agenda (BETA)'s 5th core pillar, the Digital Superhighway and Creative Economy.

We have officially launched our new Online Filing System, a secure and user-friendly platform designed to streamline the application process for industrial property (IP) rights.

With this new system, clients can now file and make payments for the following **National Applications** entirely online, from anywhere and at any time: -

- i. Patents
- ii. Industrial Designs; and
- iii. Utility Models

The e-Filing System is expected to bring benefits including 24/7 convenience whereby clients can file their applications outside of the traditional office working hours, ensure faster processing and enhance cost-effectiveness thereby saving on traveling, printing, and physical document handling costs.

The e-filing portal is live and accessible via the KIPi website under e-services menu at (<https://patentonline.kipi.go.ke/efiling/>). Additional information on how to use the e-filing system is available on the Institute's website www.kipi.go.ke.

All clients are encouraged to use this platform. For any assistance, contact us on Tel: 0702002020 and 0736002020 or email ict@kipi.go.ke.

The system operates on any mobile-money wallet or integrated financial service and uses a logic engine that applies two variables to each transaction: a percentage-based deduction and a flat "coins" amount. When a user initiates a transfer, the mechanism automatically diverts the combined captured value into a separate user-owned holding wallet before the transaction is completed. This interception ensures the savings are secured at the point of transfer without requiring additional user action. The solution may function as an independent application or as an embedded feature within a bank or mobile-money operator platform. By automating micro- savings from routine transactions, the invention enables consistent value accumulation and improved financial discipline for users

Silica molybdate is prepared by first chlorinating silica sand using phosphorous pentachloride to give chlorinated silica which is aminated using ethylenediamine and thereafter treated with sodium molybdate. The molecular structure of the silica molybdate was characterized using Fourier Transform Infrared (FT-IR). FT-IR results showed Adsorption bands at 854cm⁻¹ and 542cm⁻¹ which were attributed to Mo=O and Mo-O stretching in molybdate. Peaks observed at 1388 and 1662cm⁻¹ were attributed with the vibration mode of Mo-OH bond and bending mode of adsorbed water. Spectra peaks observed at 542, 634.58 and 898.97 cm⁻¹ were attributed to the adsorption of molybdate. The physical adsorption parameters which were examined using batch adsorption system were; temperature, pH, contact, time, initial concentration using sorption models, adsorption kinetics and thermodynamics. Results showed that optimum pH for biosorption of P042- was 6.0, optimal contact time was 30 minutes, optimum temperature was 45°C. The experimental results obtained showed that the maximum phosphate adsorption of silica molybdate at optimum conditions was found to be 94.73% in water.
